

R Consortium Working Groups

Submissions Working Group

- Collaboration between pharma industry and FDA to test R submission
- Helps sponsors and FDA understand what works and trap issues early
- Pilot submission with R in a low-risk setting
- ***Submissions Working Group encounter issues (and work to solve them) so you don't have to.***

Submissions Working Group

- Introduction – R Submissions Working Group
- Pilot 1: Submitting R output through e-sub portal; FDA reproducibility of submitted content; use of proprietary R packages (i.e. non-CRAN packages developed in-house)
- Pilot 2: Submitting a Shiny app.
- Pilot 3: Reproducible environment using {renv}
- Pilot 4: Containerisation of environment using Podman; web-assembly version of Shiny app; documentation of reproducible environment.
- Pilot 5: Use of datasetjson (rather than .xpt); using R to generate ADaM datasets.
- Pilot 6: Use of AI coding assistants to generate R programs for ADaM and TLF production; ensure programs and outputs meeting CDISC standards.
- Pilot 7: Synthetic data to benchmark R tools, AI-skills; i.e. skill definitions for statistical methods – group sequential designs.

R Validation Hub

- Working to devise a standard for validating packages for the regulated Pharmaceutical industry and create a online repository that will be free to use.
- [PharmaR](#)
- [White paper defining risk-based validation](#)
- {riskassessment}, {riskmetric} packages
- Defining package attributes that inform risk
- Has spawned a LOT of useful work and discussion...
